Empathize & Discover

Empathy Map Canvas

An empathy map captures the needs, behaviours, expectations, and concerns of the people who use a service. For this project, the map focuses on metro passengers who need a faster and more convenient way to purchase tickets without depending entirely on physical ticket counters or manual processes.

Date	24 July 2026	Team ID	Not Specified
Project Name	Digitize Metro Ticket Booking Using ServiceNow	Maximum Marks	4 Marks

Primary User Persona: Metro Passenger

The primary user is a daily commuter, student, employee, or occasional traveller who wants to complete a metro ticket booking quickly, accurately, and with minimal effort. The user expects clear station selection, transparent fare information, immediate confirmation, and a digital ticket that can be accessed when entering the metro.

SAYS • I want to book my ticket quickly. • I need to know the fare before confirming. • I do not want to wait in a long ticket queue. • I want my ticket available on my phone.	THINKS • Is the selected source and destination correct? • Is the fare calculation accurate? • Will the QR ticket be generated immediately? • Can I easily access my ticket when needed?
DOES • Selects source and destination stations. • Provides travel details and confirms the booking. • Checks the displayed fare before submission. • Uses the generated QR code for travel validation.	FEELS • Frustrated by queues and manual ticketing. • Concerned about incorrect station or fare selection. • Relieved when the booking is completed instantly. • Confident when the digital ticket is clear and accessible.

User Pains and Gains

PAINS / CHALLENGES	GAINS / EXPECTATIONS
• Long queues at ticket counters. • Time lost during peak travel hours. • Manual fare calculation may cause confusion. • Risk of selecting incorrect stations or travel details. • Physical tickets can be misplaced or damaged. • Lack of immediate booking confirmation.	• Fast self-service ticket booking. • Automatic and transparent fare calculation. • Instant digital ticket generation. • QR code available for quick validation. • Automated booking confirmation and notifications. • Simple and accessible experience through ServiceNow.

ServiceNow Solution Context

The proposed solution addresses the identified user needs by using ServiceNow capabilities to automate the complete ticket booking flow. A Service Catalog item can collect the passenger's travel details and selected stations. Flow Designer can process the request, calculate the applicable fare, generate the booking record and QR-code ticket, and trigger notifications. The result is a streamlined digital process that reduces manual effort and improves the passenger experience.

Key User Needs Identified

1. Simple station and travel-detail selection.
2. Accurate and automatic fare calculation.
3. Immediate QR-code ticket generation.
4. Automated confirmation and notification.
5. Reduced dependency on physical ticket counters.
6. Reliable access to digital booking information.
