

Problem – Solution Fit Canvas

Digitize Metro Ticket Booking Using ServiceNow

1. CUSTOMER SEGMENT(S) Metro passengers, daily commuters, students, employees, tourists, and occasional travelers who need to purchase metro tickets quickly and conveniently.	2. JOBS-TO-BE-DONE / PROBLEMS Passengers need to select a source station, destination station, and travel details, obtain the correct fare, and receive a valid ticket without spending unnecessary time in queues or relying on manual ticketing processes.
3. TRIGGERS A passenger needs to travel by metro, reaches a station, plans a journey in advance, faces long ticket-counter queues, or wants a faster and more convenient alternative to physical ticket purchasing.	4. EMOTIONS: BEFORE / AFTER Before: passengers may feel rushed, uncertain, or frustrated by queues, manual ticket handling, or delays. After: passengers feel confident and in control because the ticket is generated instantly, the fare is calculated automatically, and the QR code is ready for travel.
5. AVAILABLE SOLUTIONS Existing options include physical ticket counters, ticket vending machines, smart cards, and other digital ticketing methods where available. These options can involve queues, manual steps, physical cards, or separate systems that may not provide a simple end-to-end digital booking experience.	6. CUSTOMER CONSTRAINTS Time constraints, long queues during peak hours, limited access to ticket counters or vending machines, uncertainty about fare calculation, the need for a smartphone to display a digital ticket, and the requirement for a reliable digital process.
7. BEHAVIOUR Passengers identify their travel route, select stations, decide the number of tickets, make a booking, obtain the ticket, and present or scan the ticket for entry and travel. They prefer faster digital processes when available.	8. CHANNELS OF BEHAVIOUR Online: ServiceNow-based digital ticket booking interface, ticket details, QR code, and notifications. Offline: metro station entry points, ticket counters, vending machines, and QR-code scanning at designated access points.

9. PROBLEM ROOT CAUSE

Traditional ticketing processes can require passengers to wait in queues and complete multiple manual steps. Fare calculation and ticket generation may also be separate from the passenger's booking journey, creating avoidable delays and inconvenience.

10. YOUR SOLUTION

Digitize metro ticket booking using ServiceNow to enable fast, accessible, and automated ticket generation through QR codes. Users select stations and travel details, the system calculates the fare automatically, and a digital ticket with a QR code is generated instantly. Service Catalog, Flow Designer, and Notifications streamline the complete booking and ticket delivery process.

Purpose / Vision: To provide passengers with a faster, accessible, and efficient metro ticket booking experience by digitizing ticket selection, fare calculation, ticket generation, and QR-code delivery through a ServiceNow-based workflow.
