

Customer Journey Map

Digitize Metro Ticket Booking Using ServiceNow

Journey Stage	Passenger Goal	Passenger Actions	Touchpoint / System	Pain Point	ServiceNow Response	Emotion	Success Metric
1. Need arises	Plan a metro journey	Decides to travel and looks for a ticket	Service Portal / Catalog	Queues or uncertainty about process	Provide a clear digital booking entry point	Concerned	Time to start booking
2. Enter journey	Provide travel details	Selects source, destination, date and quantity	Catalog item	Manual entry can be confusing	Guided form and validation	Focused	Form completion rate
3. Review fare	Know the exact price	Reviews calculated fare	Flow Designer + fare logic	Unclear fare information	Automatic transparent fare calculation	Confident	Fare accuracy
4. Confirm booking	Complete purchase/request	Confirms valid booking	Booking record + workflow	Waiting for manual processing	Automated record creation and processing	Relieved	Booking processing time
5. Receive ticket	Access ticket immediately	Opens notification and QR ticket	Notification + digital ticket	Physical ticket may be lost	Instant QR-code ticket stored with booking	Satisfied	Ticket delivery success
6. Use ticket	Validate journey access	Presents QR code for validation	QR validation / station process	Difficulty accessing ticket offline	Simple ticket reference and QR display	Confident	Validation success rate
7. After journey	Check history / support	Views status or booking history	ServiceNow booking record	Hard to track past requests	Searchable records and support workflow	Assured	Self-service resolution rate

Key Opportunity: Replace queue-based ticketing with a guided ServiceNow experience that automates validation, fare calculation, ticket generation and notifications. This reduces waiting time and gives passengers immediate access to a digital QR ticket.
